

# HYDROGEN

AS A NEW POSSIBILITY FOR ENERGY TRANSFER

# THE CORRIDORS

- Renewable energy will be produced far from consumption centres
- Existing grid does not enable that scale transfer
- Large scale renewable energy production brings quickly negative prices in production areas
- New options in energy transfer evens prices
- European TSO have defined 5 corridors for hydrogen transfer
- Picture is from EHB web site

# CORRIDOR D

- Finland will have hydrogen link to Germany via Baltics and Poland
- After exploding Nord Stream sea links are not options any more for a while
- Rail Baltic corridor can accomodate hydrogen pipelines
- Renewable energy producers around pipeline benefit

# ALTERNATIVE NETWORK CONNECTION

- Hydrogen link will be alternative connection to grid
- Renewable energy producers will enjoy possibility to connect
- Remote wind parks will be linked with pipeline
- Solar and wind parks around the pipeline will have chance to connect

# THANK YOU
